

## Presentation

Opening device developed for built in ovens and cookers for domestic and professional use that automates door opening assisting kitchen activities.

**METEOR**, by using its motorized solutions, has designed an integrated system for custom specifications.

## Technical description

### Structure

Compact structure, completely in steel, capable of operating at temperatures < T200°C.

The system configuration allows use of up to 3 switches.

### Gear Motor

Gear Motor operating temperature from T125°C - T150°C.

Approvals: IMQ - VDE - UL - CSA.

### Micro switches

Micro switches with operating temperature from T125°C - T150°C - T200°C.

Approvals: IMQ - VDE - UL - CSA.

### Servo device positioning

It's easy the device positioning in various oven parts tank to flexible wire transmission.

2 Types of gear motors are possible:

- DC with maximum operating temperature of 100°C.
- AC with maximum operating temperature of 150°C.
